

# Image Processing Direct Volume Rendering

# Image Processing in SCIRun

IP / DVR

## Four primary options:

- **Native SCIRun**
  - Interpolation
  - Gradient
  - TransformFieldData
- **Teem (Nrrd, Gage, Tend, ...)**
  - N-dim raster data “Swiss Army Knife”
  - Crop, slice, permute
  - Local measures (via Gage and Tend)
- **ITK**
  - Similar filtering operations to Teem
  - Segmentation filters (threshold, confidence-connected, level sets, ...)
  - Registration
- **MATLAB**

# Teem

## Learn “unu” and “tend” (Verbs of Raster Processing)

## Decompose Complex Tasks Into Simple Steps

## Accurate Kernels

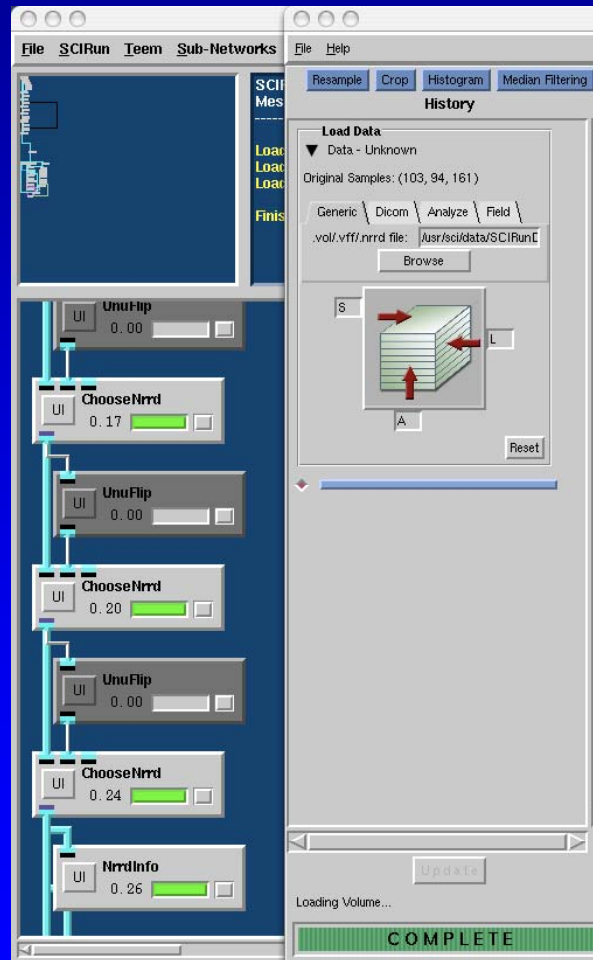

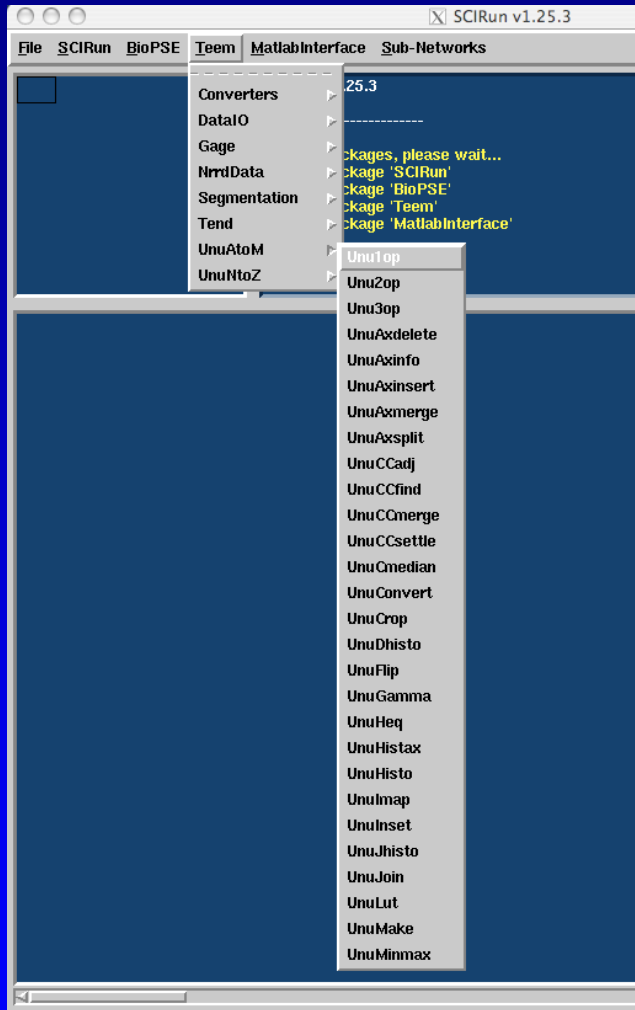

- Derivatives between sample points

```
Terminal — tcsh (tty1)
dmw stitch% tend
    --- Diffusion Tensor Processing and Analysis ---
    tend grads ... Calculate balanced gradient directions for DWI acquisition
    tend epiрег ... Register diffusion-weighted echo-planar images
    tend bmat ... Calculate B-matrix given gradient directions
    tend estim ... Estimate tensors from a set of DW images
    tend sim ... Simulate DW images from a tensor field
    tend make ... Create DT volume from confidence and eigensystem
    tend helix ... Generate twisting helical tensor field
    tend sten ... Calculate structure tensors from a scalar field
    tend glyph ... Generate postscript or ray-traced renderings of 3D glyphs
    tend ellipse ... Generate postscript renderings of 2D glyphs
    tend anplot ... Graph anisotropy metric in barycentric coords
    tend anvol ... Apply an anisotropy metric to a DT volume
    tend anscale ... Scale the anisotropic component of the tensors
    tend anhist ... Generate barycentric histograms of anisotropy
    tend point ... Describe everything about one sample in a DT volume
    tend slice ... Slice 3D tensors to get slab/image of 3D/2D tensors
    tend fiber ... Extract a single fiber tract, given a start point
    tend norm ... Normalize tensor size
    tend eval ... Calculate one or more eigenvalues in a DT volume
    tend evalpow ... Modify shape by raising eigenvalues to some power
    tend evalclamp ... Modify shape by clamping eigenvalues in some range
    tend evaladd ... Modify shape by adding a constant to all eigenvalues
    tend evec ... Calculate one or more eigenvectors in a DT volume
    tend evecrbg ... Make an RGB volume from an eigenvector and an anisotropy
    tend evq ... Quantize directions of diffusion
    tend unmf ... Applies and removes the measurement frame
    tend expand ... Converts a 7-value DT volume to a 9-value DT volume
    tend shrink ... Converts a 9-value DT volume to a 7-value DT volume
    tend bfit ... Non-linear least-squares fitting of b-value curves
    tend satin ... Generate a pretty synthetic DT volume
dmw stitch% █
```

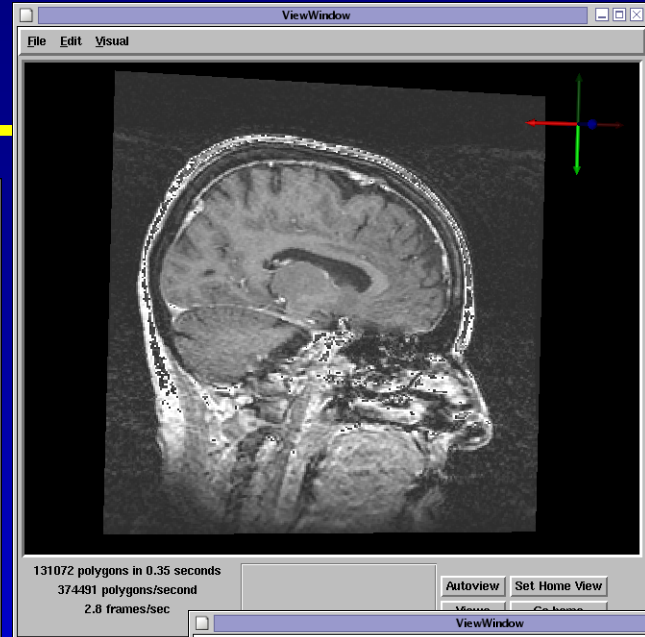

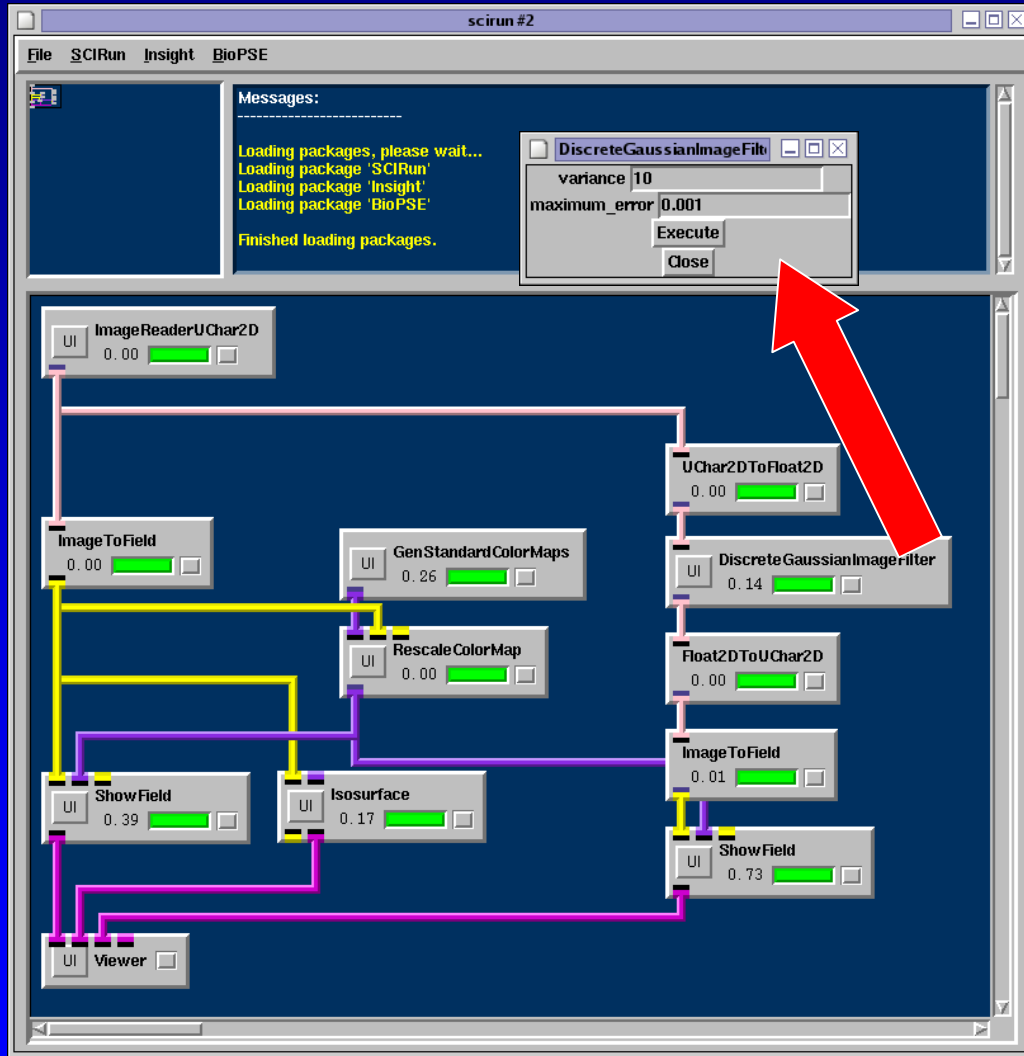

```
Terminal — tcsh (tty1)
dmw stitch% unu
    --- unu: Utah Nrrd Utilities command-line interface ---
    unu about ... Information about this program and its use
    unu env ... List relevant environment variables and their values
    unu make ... Create a nrrd (or nrrd header) from scratch
    unu head ... Print header of one or more nrrd files
    unu data ... Print data segment of a nrrd file
    unu convert ... Convert to another type (as if by cast, w/ optional clamp)
    unu resample ... Filtering and {up,down}sampling with a seperable kernel
    unu cmedian ... Cheap histogram-based median/mode filtering
    unu minmax ... Print out min and max values in one or more nrrds
    unu quantize ... Quantize values to 8, 16, or 32 bits
    unu unquantize ... Recover floating point values from quantized data
    unu project ... Collapse scanlines to scalars along some axis
    unu slice ... Slice at a position along an axis
    unu dice ... Save all slices along one axis into separate files
    unu splice ... Replace a slice with a different nrrd
    unu join ... Connect slices and/or slabs into a bigger nrrd
    unu crop ... Crop along each axis to make a smaller nrrd
    unu inset ... Replace a sub-region with a different nrrd
    unu pad ... Pad along each axis to make a bigger nrrd
    unu reshape ... Superficially change dimension and/or axes sizes
    unu permute ... Permute scan-line ordering of axes
    unu swap ... Interchange scan-line ordering of two axes
    unu shuffle ... Permute slices along one axis
    unu flip ... Reverse order of slices along one axis
    unu unorient ... make image orientation be axis-aligned
    unu axinfo ... Modify attributes of an axis
    unu axinsert ... Add a "stub" (length 1) axis to a nrrd
    unu axsplit ... Split one axis into two axes
    unu axdelete ... Remove one or more singleton axes from a nrrd
    unu axmerge ... Merge two adjacent axes into one
    unu tile ... Tile slices of one axis into two other axes
    unu untilde ... Undo "unu tile": merge slow parts of two axis splits
    unu histo ... Create 1-D histogram of values in a nrrd
    unu dhisto ... Create (PGM) image of 1-D value histogram
    unu jhisto ... Create joint histogram of two or more nrrds
    unu histax ... Replace each scanline along an axis with its histogram
    unu heq ... Perform histogram equalization
    unu gamma ... Brighten or darken values with a gamma
    unu 1op ... Unary operation on a nrrd
    unu 2op ... Binary operation on two nrrds, or on a nrrd and a constant
    unu 3op ... Ternary operation on three nrrds or constants
    unu lut ... Map nrrd through one univariate lookup table
    unu mlut ... Map nrrd through whole nrrd of univariate lookup tables
    unu subst ... Map nrrd through a univariate substitution table
    unu rmap ... Map nrrd through one *regular* univariate map ("colormap")
    unu mrmap ... Map nrrd through a whole nrrd of regular univariate maps
    unu imap ... Map nrrd through *irregular* univariate map ("colormap")
    unu lut2 ... Map nrrd through a bivariate lookup table
    unu ccfind ... Find connected components (CCs)
    unu ccadj ... Form adjacency matrix of connected components
    unu ccmerge ... Merge CCs with their neighbors, under various constraints
    unu ccsettle ... Remap CC values down to lowest contiguous values
    unu save ... Write nrrd with specific format, encoding, or endianness
dmw stitch% █

# Volume Rendering in SCIRun

The image displays the SCIRun v1.25.3 software interface, which is used for volume rendering. The main window shows a pipeline of processing blocks:

- Input:** NrrdReader (0.04) receives an 'Input Scalar'.
- Processing:** NrrdSetupTexture (0.34) feeds into UnuQuantize (0.56), which then feeds into NrrdTextureBuilder (0.71).
- Transfer Function:** TransferFuncHisto Instance #1 (0.01) feeds into EditColorMap2D (0.01).
- Visualization:** VolumeVisualizer (0.01) receives input from NrrdTextureBuilder and EditColorMap2D, and outputs to a Viewer.

The **TransferFuncHisto** package window shows a list of transfer function parameters:

- UnuJhisto: 0.80
- Unu2op: 0.81
- Unu1op: 0.83
- UnuHeq: 0.85
- UnuGamma: 0.87
- UnuQuantize: 0.88

The **EditColorMap2D\_0** window shows a histogram with three color regions: red, yellow, and blue. Below the histogram, the **Opacity Modulation (Faux Shading)** table is visible:

Name	Color	Solid	On
<input checked="" type="checkbox"/> Dentin/Pulp	Red	<input type="checkbox"/>	<input type="checkbox"/>
<input checked="" type="checkbox"/> Bone/Dentin	Yellow	<input type="checkbox"/>	<input type="checkbox"/>
<input checked="" type="checkbox"/> Dentin/Enamel	Blue	<input type="checkbox"/>	<input type="checkbox"/>
<input checked="" type="checkbox"/> Air/Enamel	White	<input type="checkbox"/>	<input type="checkbox"/>

The **VolumeVisualizer\_0** window shows display options:

- Display Options:** Basic | Sampling | Shading
- Blending Mode:** Over Operator (selected) | MIP
- Resolution (bits):** 8 | 16 | 32
- Interpolation Mode:** Trilinear (selected) | Nearest
- Show Clipping Plane Widgets

The **Viewer 1 Window 1** shows the final rendered volume, which is a 3D visualization of a biological structure with a blue translucent surface and a brownish interior.
